SUMMARY

Senior Product Manager / Ex JD.com / Authorized to Work in the U.S. / Flexible Start Date

AI-native product manager with 5+ years owning end-to-end ML product roadmaps for ads and discovery at JD.com, one of China's largest e-commerce platforms. Shipped recommendation, search relevance, and GenAI advertiser tools; delivered measurable lifts in engagement, onboarding speed, and revenue performance using experiment-driven iteration (A/B holdouts) and SQL/Python analytics. Combines rigorous product execution (OKRs, prioritization, high-stakes tradeoff decisions, stakeholder alignment, agile delivery under ambiguity) with responsible AI practices (evaluation frameworks, human-in-the-loop). Targeting technical PM, data PM, or AI program management roles at product-led technology companies.

EDUCATION

Northeastern University, Silicon Valley Campus
Master of Science in Management

San Jose, CA
Aug 2025–Expected August 2026

University of Dundee
Master of Science in Management

Scotland, U.K.
09/2019–06/2020

SKILLS

PM Skills: Product Roadmap, OKRs, PRD Development, Product Discovery, Feature Prioritization, Backlog Management, Agile/Scrum, Sprint Planning, Stakeholder Management, Go-to-Market Strategy, Scope Management, Risk Management, Program Management, Cross-functional Leadership, Trust & Safety, Content Moderation

AI & ML: LLM Product Integration, Prompt Engineering, Foundation Models, RAG Architectures, Model Fine-tuning, Agentic Systems, AI Observability, Recommendation Systems, Personalization Engines, Generative AI, Predictive Modeling, A/B Testing, AI Evaluation Frameworks, Responsible AI, Human-in-the-Loop Design, ML Pipeline Management, Neural Networks, Decision Trees, Clustering, Random Forest, Logistic Regression

Data Analytics: Data Visualization, Statistical Analysis, Performance Reporting, Dashboard Development

Programming & Tools: Python, SQL, Tableau, TensorFlow, Jira

Big Data & Cloud: Azure, Cloud Computing, Relational Databases

EXPERIENCE

Senior Product Manager, JD.com Inc. (China's #2 e-commerce platform, \$130B+ annual revenue) Shanghai, China | 11/2022–05/2025

Product areas: Ads ranking/recommendation, GenAI advertiser tooling, search relevance

- Led cross-functional working group of engineers, data scientists, and policy/ops experts (10+ stakeholders) across Ads Infra, Data Analytics, Ads Product, and Business Operations to deliver 3 AI product lines; maintained product backlog and roadmap with value-based prioritization, navigated latency/quality tradeoffs, and presented roadmap status to leadership, maintaining **100% on-time delivery** across all major milestones.
- Drove hypothesis-driven development of AI-powered recommendation engine; defined measurable OKRs, designed evaluation framework with precision/recall guardrails and A/B holdouts, partnering with ML to iterate on offline and online metrics, delivering **10% revenue increase (\$13B+ impact)** vs. pre-launch baseline.
- Built internal GenAI platform for advertiser onboarding used across Ads Product, Sales Ops, and Engineering; implemented trust & safety guardrails including human-in-the-loop review and content policy enforcement, scaling AI-generated creative adoption from **0% to 10%** while aligning Legal, Policy, and Operations on quality thresholds and rollout gates.
- Owned semantic search strategy; deployed AI observability dashboards to monitor ranking quality and detect model drift, iterating relevance through SQL analytics and controlled experiments, improving search conversion and new-user engagement by **15%+ QoQ**.

Product Manager, Chongbang Group (China's largest commercial retail platform, 130+ shopping centers) Shanghai, China | 10/2020–10/2022

Product areas: Ads targeting/segmentation, bid optimization, partner onboarding automation

- Applied AI-powered audience segmentation models to design targeted ad strategies for 10,000+ brand partners, personalizing campaign content and channel mix to drive a **35% average increase in brand campaign reach**.
- Defined requirements for ML-based bid optimization incorporating fraud signal detection and algorithmic budget allocation; validated via A/B tests, making tradeoffs between ROI, spend pacing, and risk controls, delivering **20% profitability growth** across brand campaigns.
- Partnered with Engineering and Data Analytics teams to develop AI-powered onboarding tools and automated workflow pipelines, streamlining brand partner onboarding documentation and approval processes, reducing average partner onboarding time by **30%**.
