SUMMARY

AI-native product manager with 4+ years owning end-to-end ML product roadmaps at JD.com, one of China's largest e-commerce platforms. Proven track record shipping ML recommendation systems and generative AI features that drove **10% revenue growth**. Combines deep data analytics expertise (Python, SQL) with rigorous project management practices — roadmapping, risk planning, and agile delivery — to translate complex ML engineering into responsible, measurable product experiences. Pursuing technical PM, data PM, or AI program management roles at product-led technology companies.

EDUCATION

Northeastern University, Silicon Valley Campus
Master of Science in Management

San Jose, CA
09/2025–Expected Dec 2026

University of Dundee
Master of Science in Management

Scotland, U.K.
09/2019–06/2020

SKILLS

PM Skills: Product Roadmap, OKRs, PRD Development, Product Discovery, Feature Prioritization, Backlog Management, Agile/Scrum, Sprint Planning, Stakeholder Management, Go-to-Market Strategy, Scope Management, Risk Management, Program Management, Cross-functional Leadership

AI & ML: LLM Product Integration, Prompt Engineering, Recommendation Systems, Personalization Engines, Generative AI, Predictive Modeling, A/B Testing, AI Evaluation Frameworks, Responsible AI, Human-in-the-Loop Design, ML Pipeline Management, Neural Networks, Decision Trees, Clustering, Random Forest, Logistic Regression

Data Analytics: Data Visualization, Statistical Analysis, Performance Reporting, Dashboard Development

Programming & Tools: Python, SQL, Tableau, TensorFlow, Jira

Big Data & Cloud: Azure, Cloud Computing, Relational Databases

EXPERIENCE

Senior Product Manager, *JD.com Inc. (China's #2 e-commerce platform, \$130B+ annual revenue)* Shanghai, China | 11/2022–05/2025

Product areas: Ads ranking/recommendation, GenAI advertiser tooling, search relevance

- Authored PRDs defining project scope, deliverables, and success metrics across 3 AI product lines (recommendation systems, gen AI initiatives, semantic search); led cross-departmental collaboration across Ads Infra, Data Analytics, Ads Product, and Business Operations teams (10+ stakeholders) using sprint retrospectives, maintaining **100% on-time delivery** across all major milestones.
- Led initiatives to boost product user engagement through an AI-powered recommendation engine; designed model evaluation framework with precision/recall benchmarks and A/B holdout groups, driving a **10% increase in total revenue (\$13B+ impact)**.
- Drove gen AI initiatives across JD.com to accelerate advertiser onboarding; launched AI-generated content features for ad creation and introduced human-in-the-loop review workflows to ensure content quality, scaling AI-generated content adoption from **0 to 10%** and reducing product onboarding time.
- Owned semantic search product strategy; leveraged SQL analytics pipelines to iteratively refine search ranking and relevance, optimizing user engagement, new user growth, and conversion rates to drive **15%+ QoQ improvement** in key business targets.

Product Manager, *Chongbang Group (China's largest commercial retail platform, 130+ shopping centers)* Shanghai, China | 10/2020–10/2022

Product areas: Ads targeting/segmentation, bid optimization, partner onboarding automation

- Applied AI-powered audience segmentation models to design targeted ad strategies for 10,000+ brand partners, personalizing campaign content and channel mix to drive a **35% average increase in brand campaign reach**.
- Defined product requirements for ML-based bid optimization and algorithmic budget allocation models; collaborated with data science to validate model performance and ran A/B tests to tune bidding efficiency, delivering **20% profitability growth** across brand campaigns.
- Partnered with Engineering and Data Analytics teams to develop AI-powered onboarding tools and automated workflow pipelines, streamlining brand partner onboarding documentation and approval processes, reducing average partner onboarding time by **30%**.
