SUMMARY

Senior Product Manager / Ex JD.com / Authorized to Work in the U.S. / Flexible Start Date

AI-native Product Manager with 5+ years shipping high-impact gen AI, LLM, and ML products across ads and e-commerce at JD.com (China's #2 e-commerce platform) and Chongbang Group (China's largest commercial retail platform). Led 0→1 launch of Ads AI Copilot (JD.com's first LLM-powered ad generation tool, **100% advertiser adoption**), ML feature engineering upgrade on Ads Recommendation System (**10% ROI improvement**), and first LLM-powered semantic search system. Combines deep AI product expertise — prompt engineering, ML model evaluation, A/B testing, human-in-the-loop, AI observability — with rigorous PM execution: OKRs, PRD authorship, roadmap prioritization, cross-functional leadership, and scope tradeoff decisions. Targeting technical PM, data PM, AI PM or ads PM roles at product-led technology companies.

EDUCATION

Northeastern University

San Jose, CA

Master of Science in Management

University of Dundee

Scotland, U.K.

Master of Science in Management

SKILLS

PM Skills: Product Roadmap, OKRs, PRD Development, Product Discovery, Feature Prioritization, Backlog Management, Agile/Scrum, Sprint Planning, Stakeholder Management, Go-to-Market Strategy, Scope Management, Risk Management, Program Management, Cross-functional Leadership, Trust & Safety, Content Moderation

AI & ML: LLM Product Integration, Prompt Engineering, Foundation Models, RAG Architectures, Model Fine-tuning, Agentic Systems, AI Observability, Recommendation Systems, Personalization Engines, Generative AI, Predictive Modeling, A/B Testing, AI Evaluation Frameworks, Responsible AI, Human-in-the-Loop Design, ML Pipeline Management, Neural Networks, Decision Trees, Clustering, Random Forest, Logistic Regression

Data Analytics: Data Visualization, Statistical Analysis, Performance Reporting, Dashboard Development

Programming & Tools: Python, SQL, Tableau, TensorFlow, Jira

EXPERIENCE

Senior Product Manager, JD.com Inc. (China's #2 e-commerce platform)

Shanghai, China | 11/2022–05/2025

Ads AI Copilot — GenAI advertiser tooling

- Delivered **80% reduction in ad creation time** (3 hours → 20 minutes), **100% advertiser adoption** and **10% revenue uplift** (\$13B+ impact), by owning the 0→1 launch of Ads AI Copilot — JD.com's first-of-its-kind AI-powered ad generation tool.
- Validated the performance of Ads AI Copilot via A/B testing, implementing responsible AI guardrails with human-in-the-loop review — confirming **20% accuracy improvement** while preventing hallucination and brand misrepresentation.
- Authored end-to-end PRD, led prompt engineering strategy, and drove cross-functional alignment across Data, Engineering, and Marketing — delivering **100% on schedule** and earning Director and VP endorsement.

Ads Recommendation System — ML feature engineering

- Delivered **10% ROI improvement** for JD's advertisers by spearheading ML feature engineering initiatives on JD.com's Ads Recommendation System — replacing static demographic signals with real-time user intent features (live search, browsing behavior, contextual interests) for more precise ad ranking.
- Owned end-to-end execution — authored PRD, led cross-functional teams across ML Engineering, Data, and Business Operations for model fine-tuning and production migration, and introduced AI observability and human-in-the-loop review.
- Led model evaluation via 30-day A/B test against legacy ranking baseline — confirmed **20% CTR uplift** and drove **100% platform-wide adoption**.

Product Manager, Chongbang Group (China's largest commercial retail platform)

Shanghai, China | 10/2020–10/2022

Semantic Search

- Delivered **5% revenue increase** by shipping Chongbang's first LLM-powered semantic search — replacing keyword-only discovery with AI-driven intent understanding.
- Identified low brand discoverability as a key revenue risk; prioritized semantic search as the top product strategy, defined OKRs and north star metrics, and authored end-to-end PRD (scope, requirements, success metrics).
- Drove cross-functional execution across Data and Engineering — managing backlog, sprint priorities, and stakeholder alignment; navigated cross-team timeline conflicts through clear prioritization and scope decisions — maintaining on-schedule and within-budget delivery.
- Designed A/B testing to benchmark semantic search against keyword-only discovery; partnered with the Data team to quantify per-brand CTR lift, validate rollout readiness, and drive platform-wide adoption.
