SUMMARY

AI-native product manager with 4+ years owning end-to-end ML product roadmaps at JD.com, one of China's largest e-commerce platforms. Proven track record shipping NLP, recommendation, and generative AI features that drove **10% GMV growth and 20% profitability gains** across 10,000+ brands. Expert at AI product discovery, model evaluation design, and translating ML outputs into responsible, human-in-the-loop product experiences. Targeting AI PM roles at product-led technology companies.

EDUCATION

Northeastern University, Silicon Valley Campus
Master of Science in Project Management

San Jose, CA
09/2025–Expected Dec 2026

Coursework: Foundations of Project Management, Scope Management, Risk Management, Leadership in Analytics, AI Applications in Management

University of Dundee

Master of Science in Management & International Human Resource Management

Scotland, U.K.
09/2019–06/2020

SKILLS

Product Management: Product Roadmap, OKRs, PRD Development, Go-to-Market Strategy, Product Discovery, User Research, Customer Journey Mapping, Feature Prioritization, Backlog Management, Sprint Planning, Agile/Scrum, Waterfall, Change Management, RACI, Stakeholder Management

AI & ML: LLM Product Integration, Prompt Engineering, RAG, Vector Search, NLP, Recommendation Systems, Personalization Engines, Generative AI, Predictive Modeling, A/B Testing, AI Evaluation Frameworks, Responsible AI, Human-in-the-Loop Design, ML Pipeline Management

Tools: Jira, Asana, Figma, SQL, Python, Tableau, Mixpanel, Google Analytics, Cursor, Adobe Creative Suite

Languages: Mandarin (Native), English (Fluent)

EXPERIENCE

Senior Product Manager, JD.com Inc. (China's #2 e-commerce platform, \$600B+ annual GMV) Shanghai, China | 11/2022–05/2025

- Defined and owned a 12-month AI product roadmap across 3 product lines (semantic search with vector embeddings and BERT-based ranking, personalization engine, LLM-powered generative content with prompt engineering and hallucination guardrails); authored PRDs with OKRs, model evaluation criteria, and acceptance criteria aligned across engineering, data science, and business stakeholders.
- Launched an AI-powered recommendation engine, designing a model evaluation framework with precision/recall benchmarks and A/B holdout groups to validate quality before rollout; drove a **10% increase in total GMV** as measured by quarterly revenue targets.
- Led product discovery sprints and customer journey mapping to define AI personalization and live-streaming automation features; implemented human-in-the-loop review workflows for AI-generated content decisions and tracked success against HEART framework metrics and north star KPIs.
- Bridged data science, engineering, and business teams (10+ stakeholders) using RACI frameworks and sprint retrospectives to translate ML model outputs into user stories and go-to-market strategies, maintaining **100% on-time delivery** across all major quarterly releases.
- Monitored north star metrics via Mixpanel and SQL analytics pipelines, identifying funnel drop-offs and re-prioritizing backlog features to drive **15%+ QoQ improvement** in new user acquisition and conversion rates.

Product Manager, Chongbang Group (China's largest retail mall operator, 130+ shopping centers) Shanghai, China | 10/2020–10/2022

- Designed go-to-market strategies and AI-searchable advertising campaigns for 10,000+ tenant brands, applying competitive analysis and customer persona development to boost marketplace visibility and drive a **35% average increase in brand campaign reach** across global channels.
- Built and deployed ML-based bid optimization and algorithmic budget allocation tools using gradient-boosted forecasting models, delivering **20% profitability growth** for 1,000+ brands and a **90% tenant renewal rate** as measured by annual contract retention.
- Conducted voice-of-customer research across 50+ merchants and drove process improvement initiatives, synthesizing findings into prioritized roadmaps with risk registers that reduced average merchant onboarding time by **30%** and eliminated top-3 recurring operational bottlenecks.
- Achieved a **10% profitability uplift** across the commercial ecosystem by deploying AI-assisted KPI dashboards with predictive churn modeling, enabling proactive interventions measured by merchant NPS and revenue retention.
